The present invention describes a method for immunisation comprising . separate administration of an immunogenic sustained-release composition and an immune response enhancing composition. Also described are: (i) an immunisation kit for increasing the immune response to a vaccine target composition and an immune response stimulating composition; and (ii) an improved composition for parenteral immunisation composition; and (ii) an sustained-release immunogenic composition and an immune response stimulating composition; and (iii) an sustained-release immunogenic composition and an immune response

Improved method for immunization gives increased antibody titers and reduced irritation by using separate administration of a sustained-release immunogen and adjuvant.

The method comprises administering anti-GnRH antibodies which bind and neutralize Gonadotropin Releasing Hormone (GnRH) in vivo. The anti-GnRH immunogenic composition comprises a GnRH immunogenic peptide conjugated through the terminal Cys of the spacer peptide to an immunogenic carrier, preferably diphtheria or
enhancing composition. The method is useful for improving the immune response to an immunogen by eliciting a significant anti-immunogen antibody titre increase. The method is effective in enhancing a high antibody titre allowing a reduction in the amount of the immunomimicking portion of the immunogen and may reduce local irritation at the site of incoulation. The separate administration allows the relative doses to be adjusted to produce the optimum response. The present sequence represents an immunomimic which is given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Administering antibodies or immunogenic compositions against gonadotropin

Also described: (1) an immunogenic composition (C) comprising eotaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiasthmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human eotaxin epicope and spacer amino acid sequence, which is used in the exemplification of the present
tetanus toxoid, with carrier/peptide ratio being in the range of 4.7 to 30.1 peptide molecules per carrier molecule. The method is used to treat GnRH-dependent cancer, particularly of the breast, uterus or prostate, oestrogen-dependent cancer, endometriosis or prostatic hypertrophy. The present sequence represents a GnRH immunogen peptide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in the subject to eotaxin.
                                                                                                                                                                                    Gaрв

The present invention describes a method for treating a subject for a condition mediated by cotaxin comprising generating an active immune response in the subject to eotaxin. Also described: (1) an immunogenic composition (C) comprising eotaxin or its peptide fragment coupled to an immunogenic protein carrier: (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiasthmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by cotaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human ectaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in the subject to eotaxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

Also described: (1) an immunogenic composition (C) comprising ectaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiasthmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by ectaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human ectaxin epitope and spacer aminogenic equations.
                                                                                                                                                                                                                                                                                                                            Treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in

The present invention describes a method for treating a subject for a condition mediated by cotaxin comprising generating an active immune response in the subject to ectaxin. Also described: (1) an immunogent composition (C) comprising cotaxin or its peptide fragment coupled to an immunogent protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiasthmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by cotaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human ectaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in the subject to eotaxin.
                                                                                                                 Treating a subject for a condition mediated by ectaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in the subject to ectaxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      eotaxin; immune response; immunogenic; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human; spacer; epitope.

condition mediated by eotaxin comprising generating an active immune response in the subject to eotaxin. Also described: (1) an immunogenic composition (C) comprising eotaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiaethmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human eotaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present

condition mediated by ectaxin comprising generating an active immune response in the subject to ectaxin. Also described: (1) an immunogenic composition (C) comprising ectaxin. Also described: (1) an immunogenic composition (C) comprising ectaxin or its peptide fragment coupled to an formulation for use as a vaccine comprising (C); and (3) a plarmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a used in vaccines. The method is useful for treating a subject for a condition mediated by ectaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human ectaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present invention.

The present invention describes a method for treating a subject for a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to injectable liposomal compositions (I) for delivery of a water-soluble substance e.g. immunomimic peptides. (I) comprises several liposomal vesicles comprising a high weight ratio of a lipid to an encapsulated water-soluble substance so as to achieve a high efficiency of encapsulation. The immunomimic peptide is chosen from gastrin G-17 (ADH89206 to ADH89213 and ADH89223), gastrin G-34 (ADH89217-ADH892219), gonadotropin releasing hormone (GnRH) peptide (ADH89220 and ADH89222 and ADH89222). (I) comprising vaccines directed against hormone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          or hormone cognate receptors, where the vaccine comprises at least one: hormone-immunomimic peptide such as gastrin G-17 or G-34 is useful for treating gastrointestinal malignancy, and non-gastrointestinal tumors
                                                                                                                                                                                                                                                                                                                                     Cytostatic; Contraceptive; Vaccine; immunomimic peptide; gastrin G-17; gastrin G-34; gonadotropin releasing hormone; GRRH; contionic gonadotropin; hCG; hormone; gastrointestinal malignancy; thyroid cancer; lung cancer; reproductive system cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the patient comprising autoantibodies to ectaxin and interleukin (IL)-5 (or IL-4, IL-9 and IL-13). The invention may be useful for the development of compounds with an antiinflammatory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil secumilation, such as asthma, allergy or allergic diseases. The present sequence is that of a peptide fragment derived from human eotaxin which may be used within the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.
such as thyroid and lung cancer; or GnRH or hCG immunomimic peptide is useful as contraceptive and for treating cancers in male and female reproductive systems. The present sequence comprises a G17 peptide linked to a spacer peptide at the C-terminal end.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            inflammatory condition; eosinophil accumulation; immune response; autoantibody; eotaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antifillemmatory; antisathmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human.

The invention may be useful for the development of compounds with an antiniflammatory, antisathmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil accumulation, such as asthma, allergy or allergic diseases. The present sequence is that of a modified (cysteine residues substituted by threonine) peptide fragment derived from human eotaxin which may be used within the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.
                                                                                                       inflammatory condition; eosinophil accumulation; immune response; autoantibody; eotaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antinflammatory; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the partient comprising autoantibodies to ectaxin and interleukin [IL)-5 (or IL-4, IL-9 and IL-13). The invention may be useful for the development of compounds with an antinflammatory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil accumulation, such as asthma, allergy or allergic diseases. The present sequence is that of a modified (cysteine residues substituted by threonine) peptide fragment derived from human eotaxin which may be used within the method of the invention.
                                                                                                                                                                                                                                                                        Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.

The invention may be useful for the development of compounds with an antiinflammatory, antisathmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil secumilation, such as asthma, allergy or allergic diseases. The present sequence is that of a modified (cysteine residues substituted by threonine) peptide fragment derived from human eotaxin which may be used
                                                                                                                                                                                                                                                                                                                                                                                                                   Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         inflammatory condition; eosinophil accumulation; immune response; autoantibody; eotaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antiinflammatory; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human.

This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the patient comprising autoantibodies to ectaxin and interleukin (IL)-5 (or IL-4, IL-9 and IL-13). The invention may be useful for the development of compounds with an antinflammatory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil secumilation, such as asthma, allergy or allergic diseases. The present sequence is that of a peptide fragment derived from human ectaxin which may be used within the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the patient comprising autoantibodies to eotaxin and interleukin (IL)-5 (or IL-4, IL-9 and IL-13). The invention may be useful for the development of compounds with an antiinflammatory, antiasthmatic or antiallergic activity or for the
                Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active mmune response against eotaxin and interleukin-5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             inflammatory condition; eosinophil accumulation; immune response; autoantibody; eotaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antianflammatory; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the patient comprising autoantibodies to ectaxin and interleukin (IL)-5 (or IL-4, IL-9 and IL-13). The invention may be useful for the development of compounds with an antiinflammatory, antisathmatic or antiallergic activity or for the production of a vaccine. The compostion and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil accumulation, such as asthma, allergy or allergic diseases. The present sequence is that of a modified (cysteine residues substituted by threonine) peptide fragment derived from human IL-5 which may be used within the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            inflammatory condition; eosinophil accumulation; immune response; autoantibody; eotaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antinflammatory; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human.
production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil accumulation, such as asthma, allergy or allergic diseases. The present sequence is that of a peptide fragment derived from human eotaxin which may be used within the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to a novel immunogen that comprises a gastrin
receptor peptide epitope (GRB) - formally designated as GRP - conjugated
co an immunogenic carrier for the treatment of gastrin-dependent tumours.
Specifically, it refers to immunogens (immunostimulators) capable of
inducing antibodies in vivo that can bind to gastrin receptors and as
such prevent binding of growth stimulating peptide hormones, which in
turn can be used to prevent or treat gastrin stimulated malignant or
premalignant growth. The present invention describes the active or
passive immunisation of a patient with a CCK-B/gastrin receptor immunogen
or antibody thereof that are specific to the tumour and can be used to
arrest tumour growth. As such, the method is useful for diagnosing the
gastrin receptor in a biopsy, which involves obtaining a biopsy specimen
from a patient, exposing the specimen to antibodies conjugated to
detectable molecules, and hence detecting the amount of bound antibody by
colorimetric, chemiluminescent, fluorescent, radiometric or scintigraphic
techniques. This peptide sequence is a human CCK-B/gastrin receptor
immunominic peptide with a synthetic spacer used to project the peptide
caway from the protein carrier, in order to enhance binding to the
lymphocyte receptors, given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel immunogen comprising gastrin receptor-peptide epitope conjugated at its cysteine end to immunogenic carrier, useful for treating patient suffering from gastrin responsive tumor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Novel immunogen comprising gastrin receptor-peptide epitope conjugated at its cysteine end to immunogenic carrier, useful for treating patient suffering from gastrin responsive tumor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to a novel immunogen that comprises a gastrin receptor peptide epitope (GRE) - formally designated as GRP - conjugated to an immunogenic carrier for the treatment of gastrin-dependent tumours. Specifically, it refers to immunogens (immunostimulators) capable of inducing antibodies in vivo that can bind to gastrin receptors and as such prevent binding of growth stimulating peptide hormones, which in turn can be used to prevent or treat gastrin stimulated malignant or passive immunisation of a patient with a CCK-B/gastrin receptor immunogen or antibody thereof that are appecific to the tumour and can be used to arrest tumour growth. As such, the method is useful for diagnosing the gastrin receptor in a biopsy, which involves obtaining a biopsy specimen from a patient, exposing the appecimen to antibodies conjugated to detectable molecules, and hence detecting the amount of bound antibody by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             chemiluminescent, fluorescent, radiometric or scintigraphic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                COLORIMECLIS, CHEMILIANDERCONS, ELECANIQUES. This peptide sequence is a human CCK-B/ gastrin receptor immunomimic peptide with a synthetic spacer used to project the peptide to the contract the contract of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The present invention describes a method for treating a subject for a condition mediated by ectaxin comprising generating an active immune response in the subject to ectaxin. Also described: (1) an immunocention (C) comprising ectaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiasthmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by ectaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human ectaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                   Treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               eotaxin; immune response; immunogenic; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human; spacer; epitope.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a method for treating a subject for a condition mediated by ectaxin comprising generating an active immune response in the subject to ectaxin. Also described: (1) an immunogenic composition (C) comprising ectaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiaethmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by cotaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human ectaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in the subject to eotaxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             eotaxin; immune response; immunogenic; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human; spacer; epitope.

                                                                                                      The present invention describes a method for treating a subject for a condition mediated by ectaxin comprising generating an active immune response in the subject to ectaxin. Also described: (1) an immunogenic composition (C) comprising ectaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiasthmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by ectaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human ectaxin epitope and spacer aminogeid sequence, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to a novel method of treating a subject for an fulflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the patient comprising automatibodies to eotaxin and interleukin (II)-5 (or IL-4, IL-9 and IL-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     inflammatory condition; eosinophil accumulation; immune response; autoantibody; eotaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antialinamatory; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human; spacer peptide.

The invention may be useful for the development of compounds with an antiinflammatory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from ecsinophil secumulation, such as asthma, allergy or allergic diseases. The present sequence is that of a peptide, derived from human ectaxin linked to a spacer peptide, which may be used within the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.
 an
             antififlammatory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil accumulation, such as asthma, allergy or allergic diseases. The present sequence is that of a peptide, derived from human eotaxin linked to a spacer peptide, which may be used within the method of the invention.

The present invention describes a method for treating a subject for a condition mediated by cotaxin comprising generating an active immune response in the subject to cotaxin. Also described: (1) an immunocation (C) comprising cotaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiasthmetic and mitiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by cotaxin, e.g. asthme, allergy or allergic disease. The present sequence represents a human ectaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in the subject to eotaxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         eotaxin; immune response; immunogenic; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human; spacer; epitope.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the patient comprising autoantibodies to ectaxin and interleukin [IL]-5 (or IL-4, IL-9 and IL-13). The invention may be useful for the development of compounds with an antinflammatory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil secumilation, such as asthma, allergy or allergic diseases. The present sequence is that of a peptide, derived from human eotaxin linked to a spacer peptide, which may be used within the method of the invention.

                                                                                                                                                                                                       The present invention describes a method for treating a subject for a condition mediated by ectaxin comprising generating an active immune response in the subject to ectaxin. Also described: (1) an immunogenic composition (C) comprising ectaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiasthmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by ectaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human ectaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present
                                                                                                                                             Treating a subject for a condition mediated by ectaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in

This invention relates to a novel immunogen that comprises a gastrin receptor peptide epitope (GRE) - formally designated as GRP - conjugated to an immunogentic carrier for the treatment of gastrin-dependent tumours. Specifically, it refers to immunogens (immunostimulators) capable of inducing antibodies in vivo that can bind to gastrin receptors and as such prevent binding of growth stimulating peptide hormones, which in turn can be used to prevent or treat gastrin stimulated malignant or premalignant growth. The present invention describes the active or passive immunisation of a patient with a CCK-S/gastrin receptor immunogen or arrest tumour growth. As such, the method is useful for diagnosing the gastrin receptor in a blopsy, which involves obtaining a biopsy specimen of arrest tumour growth. As such, the method is useful for diagnosing the appealment to antibodies conjugated to detectable molecules, and hence detecting the amount of bound antibody by colorimetric, chemiluminescent, fluorescent, radiometric or scintigraphic immunominic peptide with a synthetic spacer used to project the peptide away from the protein carrier, in order to enhance binding to the immunominic arrival carrier; in an exemplification of the invention.
Novel immunogen comprising gastrin receptor-peptide epitope conjugated at its cysteine end to immunogenic carrier, useful for treating patient suffering from gastrin responsive tumor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             inflammatory condition; eosinophil accumulation; immune response; autoantibody; eotaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antiallammatory; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human; spacer peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating inflammatory conditions resulting from eosinophil accumulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

```

preventing or treating inflammatory conditions resulting from eosinophil accumilation, such as asthma, allargy or allargic diseases. The present sequence is that of a peptide, derived from human eotaxin linked to a spacer peptide, which may be used within the method of the invention.

The composition and methods are useful for

production of a vaccine.

```
This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosimophil accumulation which comprises generating an active immune response in the patient comprising autoantibodies to eotaxin and interleukin (IL)-5 (or IL-4, IL-9 and IL-13). The invention may be useful for the development of compounds with an antinfilammetory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil secumilation, such as asthma, allergy or allergic diseases. The present sequence is that of a peptide, derived from human eotaxin linked to a spacer peptide, which may be used within the method of the invention.
(e.g. asthma, allergy or allergic disease) comprises generating an active
1mmune response against eotaxin and interleukin-5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    inflammatory condition; eosinophil accumulation; immune response; aucoantibody; eotaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antialtammatory; antialtergic; vaccine; asthma; allergy; allergic disease; human; spacer peptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       invention has cytostatic, vasoriopic, haemostatic, cardiovascular, gastrointestinal, immunomodulator, inotropic, cerebroprotective, neuroprotective, nephrotropic, antinfiamatory, antibacterial, virucide, gracecological, and antidiabetic activity. A polymucleotide of the invention may have a use in gene therapy, and as a vaccine. The methods and compositions of the invention are useful for diagnosing, preventing, treating and/or ameliorating diseases as cancer (neural, reproductive, gastrointestinal, endocrine, renal, CNS and respiratory neoplasias), blood disorders, immune disorders, infections, infitammatory disorders and type II diabetes. They can also be used in chromosome identification, screening assays and molecular weight markers. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel isolated polypeptide. This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the patient comprising autoantibodies to eotaxin and interleukin  $(\mathrm{IL})$ -5 (or  $\mathrm{IL}$ -4,  $\mathrm{IL}$ -9 and  $\mathrm{IL}$ -13). The invention may be useful for the development of compounds with an antiinflammatory, antiasthmatic or antiallergic activity or for the

Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.

                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel isolated polypeptide. A protein of the invention has cytostatic, vasotropic, haemostatic, cardiovascular, gastrointestinal, immunomodulator, inotropic, carebroprotective, nephrotropic, antiinflammatory, antibacterial, virucide, gynaecological, and antidiabetic activity. A polynucleotide of the invention may have a use in gene therapy, and as a vaccine. The methods and compositions of the invention are useful for diagnosing, preventing, treating and/or ameliorating diseases such as cancer (neural, reproductive, gastrointestinal, endocrine, renal, CNS and respiratory neoplasias), blood disorders, immune disorders, infections, inflammatory disorders and type II diabetes. They can also be used in chromosome identification, screening assays and molecular weight markers. The present sequence is used in the exemplification of the invention.

The invention describes a transgenic plant comprising a recombinant polymuclectide of any one of more than $00 mucleotide sequences fully defined in the specification or its complement. The method of the invention can be used to produced a plant having altered traits such as: enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone sensitivity disease resistence; sugar sensing; early or late flowering; altered flower structure, change in stem bifurcations, altered branching pattern, reduced apical dominance, reduced trichome density; lack of
                                                                                                                                                                                                                              transgenic; plant; enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone sensitivity; disease resistance; glyphosphate tolerance; hormone sensitivity; disease resistance; sugar sensing; flowering; flower structure; stem bifurcation; branching pattern; apical dominance; trichome; stem morphology; root growth; root hair; seed development; cell proliferation; cell differentiation; premature senescence; necrosis; plant size; leaf morphology; seed morphology; seed biochemistry; root anthocyanin; plant anthocyanin; light response; shade avoidance; bioinformatic; transcription factor; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Broun PE;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New transgenic plant comprising a recombinant polynucleotide of any or of more than 500 nucleotide sequences, useful in bioinformatic search methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Haake V;

The transgenic plant and methods are useful for producing commercially or agriculturally useful plants having improved tolerance to drought, shade and low nitrogen conditions when compared to wild-type reference plants. The present sequence is that of plant transcription factor protein which was used during the development of the transgenic plants of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       transcription factor; transgenic plant; agriculture; drought resistance;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to a novel plant transcription factor polypeptides, the DNA sequences which encode them and their use in creating transgenic plants. The transgenic plant and methods are useful for producing commercially or agriculturally useful plants having improved tolerance to drought, shade and low nirrogen conditions when compared to wild-type reference plants. The present sequence is that of a plant transcription factor protein which was used during the development of the transgenic plants of the invention.

Sequence 1, Application US/10244324A

Sequence 1, Application US/1024324A

Publication No. US20030162795A1

GENERAL INFORMATION:

APPLICANT: Pfizer Product Inc.

TITLE OF INVENTION: THIENOPYRIVAIDINE AND THIENOPYRIDINE DERIVATIVES

TITLE OF INVENTION: USEFUL AS ANTICANCER AGENTS

FILE REFERENCE: PC9882C

CURRENT APPLICATION NUMBER: US/10/244,324A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ) OTHER INFORMATION: Description of Artificial Sequence: Synthetic; OTHER INFORMATION: Peptide

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
